Our

Story

In 2017, we built our first two MOHAB Spaces in the lake-side town of Pogradec, Albania. The intention of these spaces was to provide students with a practical, eco-friendly place where they could focus on their studies while living harmoniously with the landscape.

In 2018, we paired with an NGO that provides educational facilities and food to communities all over the world. We soon realised that together with the NGO, we had the means to help solve a variety of global issues such as the housing crisis, climate change and educational limitations faced by underserved communities.

Based in Germany, MOHAB now provides minimal, sustainable spaces that residents, students and businesses can feel productive, independent, comfortable and responsible living and working in.

We're committed to the United Nations' 17 Sustainable Development Goals of the 2030 Agenda. We're committed to innovative, high-quality design.

**We're committed
to our planet and
we're committed
to change.**

Values & Mission

We envision a world impacted positively by people and design. To make our vision a reality, we promote sustainability through smartly-designed, eco-friendly spaces that exist in harmony with our planet.

We don't just voice our values, we live them. Everyday, inside and out.

Boldness

We don't shy away from the tough stuff. We take real action and have real conversations. We are not afraid to stand up for what we believe is true and good in order to incite real change.

Excellence

We strive for excellence in both design and ethics. Our Mohab Spaces are tastefully and consciously made to positively impact people's lives and the environment.

Curious

We approach everything we do with an open mind and open heart. We're hungry to learn more: more about people, more about the environment, more about our world.

Approach-ability

We are empathetic, earnest and warm. Afterall, we're human. And we want to hear from you, whether you're a customer, company, ally or skeptic. Our only competitor is climate change. So reach out, we're listening.

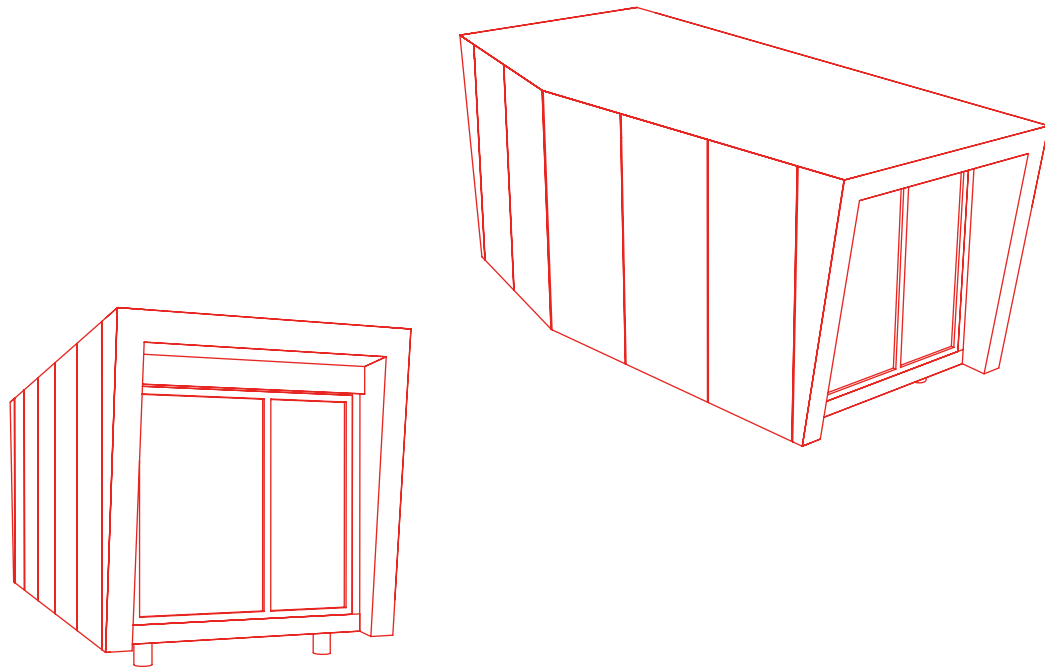

SPACES

MOHAB Spaces are ethically and flexibly designed homes and workplaces made of recyclable materials sourced mostly locally from the Black Forest.

Archi- tecture

Spaces are cubature in shape with an asymmetrical outer wall for a spacious interior of 20 square meters.

The sturdy facade, extended roof, and natural larch wood windows with external blinds create a timeless look while providing the interior with shade and heat protection.

Interior

Inside, the three-layered, spruce tree paneled wall cladding and large windows keep the temperature comfortable and lighting adjustable while creating a homely atmosphere.

The provided furniture units are both high-quality and multi-functional. The bed, desk, wardrobe and shelves fold, collapse and change form to meet various spatial needs.

There are a variety of lighting options, which can be seamlessly controlled from your personal electronic devices. Temperature can also be further controlled with the air-to-air heat pump and fan with heat recovery.

Customization

Interior features, such as furniture, flooring and acoustic ceilings can be modified upon request.

For further customizations, we do our best to provide sustainable adjustments where possible.

Traceability & Sustainability

Interior and exterior wood, aluminum and insulation are made of recyclable materials sourced locally from the Black Forest.

Spaces are as energetically self-sufficient as possible and will eventually source all energy from a solar paneled exterior.
